

Renewable Energy Programs

We are proud of our longstanding commitment to renewable energy options. We offer several options to reduce future electricity consumption and help members who want to participate in responsible energy initiatives.

SYSTEM INTERCONNECTION

Our cooperative has a robust and comprehensive interconnection process and project team that can

help businesses with installing solar, batteries or other on-site solutions to meet members' needs.

Learn more at pec.coop/system-interconnection.

RENEWABLE PORTFOLIO MIX

Our portfolio renewable percentage for 2017 was approximately 6 percent.

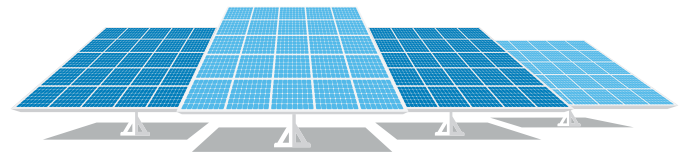

The Cooperative has the option to contract up to 15% of renewable energy sources as it is beneficial to the portfolio.

RENEWABLE ENERGY GOALS

We manage a portfolio of Texas RECs that we offer to our members through an adder to the energy rate, selling remaining RECs to maximize value to membership.

We also have experience and expertise registering sites with the Public Utility Commission of Texas to receive Texas Renewable Energy Credits (RECs).

COOPERATIVE SOLAR PROGRAM

PEC purchases solar energy from facilities located within the service area to provide a solar power option to members that wish to participate.
