

Save more in 2022

Ring in the new year with our seasonal guide to saving all year long

Winter

Set your thermostat to 68 degrees. If you have a heat pump, don't increase the temperature by more than 2 degrees at a time.

Spring

Check your HVAC filters. If they're dirty, replace them. Then, set a monthly reminder to check them again.

Summer

Remember Power Rush Hour®!
Shift your energy use from 2-7 p.m. every June through September. By working together to use less energy during peak times, you and your fellow members can save money now and later.

Fall

Let your plants grow savings. On the west side of your home, plant trees with full canopies, like oaks, to block heat from the afternoon sun. Trees larger than 40 feet in mature height should be at least 60 feet away from electric poles.
